

How the **SATATRACK** Team Does It For You!

1

You realize you have a remote monitoring, asset tracking or asset management need. This is often the most important part!

Software

Hardware

Our team works with you to refine your need and make sure we have everything needed to custom engineer YOUR solution.

2

The Component Integration Team brings the design to life! This team puts all of the components together, exactly how you need them, with the final result in mind!

The Install Team receives your custom solution and installs your solution to the specifications you need -- waterproof, dust proof, wind proof, explosion proof and everything in between! The install team also tests your custom engineered solution one last time to make sure everything is exactly right!

6

Our design team takes your refined need and designs a solution that will give you all of the critical data for all of the assets you need. This is based on the refined need and various communication types necessary to accomplish your goal.

3

Your success is our goal!

The Test Team receives your custom engineered solution and tests every part and piece, to make sure every component is working properly, and the solution will accurately produce the results you need. We want to make sure we got it just right for YOU!

5

This is our most favorite part of the whole entire process because it is all about YOU! All YOU have to do is log onto the web-application and start seeing your assets, and receiving the critical data you need.
